NOTES.
1. 본 도면은 PEM NUT 압입 도면임.
2. 압입 작업 후 직각도 유지 할 것.
③. 압입 작업 후 아래와 같이 Torque-out 강도를 유지 하도록 할 것.
- M3 PEM NUT : 30Kgf.cm 이상, M4/M5 PEM NUT : 60Kgf.cm 이상
4. Torque-out 테스트
- SCM 재질의 육각 머리 볼트를 체결후 토크 렌치로 Torque-out 강도를 측정 한다.

<Torque-out test>

5. 외곽 파단면 전둘레는 녹방지를 위해 은분처리 또는 그에 준하는 작업(방청)을 할 것.
- 파단면 녹방지 작업은 작업 표준서 (S8-16-0001)에 준할 것.
- 은분 작업은 Silver Powder Oil Base Pen (Korea Monami) 또는 유사품 사용할 것
- 방청(OKC Rust #701) 적용품은 파단면에 검은색 점표시 2개할 것(10mm 이내)
6. ◯ 표시부는 치수 또는 주석의 수검 관리 항목임.

NOTES.
1. This is a drawing for PEM NUT indentation.
2. Make sure to maintain the perpendicularity after indentation.
③. Make sure to maintain torque-out strength as below.
- M3 PEM NUT : 30Kgf.cm or more, M4/M5 PEM NUT : 60Kgf.cm or more
4. Torque-out test
- Measure torque-out strength with a torque wrench after fastening a hexagonal head bolt made of SCM material.

<Torque-out test>

5. The outer fracture surface should be painted with silver powder on all the rounds or treated with comparable work (rust proofing treatment) to prevent rust.
- The rust proofing treatment should be complied with Manufacturing Standards (S8-16-0001).
- For painting with silver powder, make sure to use Silver Powder Oil Base Pen (made by Monami, Korea) or similar ones.
- Make sure to mark two black dots on the fracture surface of any parts (within 10mm) to which Rust proofing treatment (OKC RUST #701) has been applied.
6. ◯: This mark means the dimension or notes item to be inspected.
